WEB PROGRAMMING ACTIVITY 1.1

Title: Boolean Web

Objective: Our website is your go-to platform for tracking your monthly learning progress, with a comprehensive "Progress Tracker" that not only monitors your achievements but also offers valuable insights into optimizing your learning journey. It also ensures easy navigation and a seamless user experience.

Target Audience: Students and self-learners

Budget: 2,662,000 pesos

Development Timeline: The project is estimated to take 8 months to complete.

Number of Programmers: We have a team of 6 programmers.

Rate per Person: To calculate how much each programmer will receive per month from the adjusted budget and timeline, divide the total budget by the number of months (8) and then divide that result by the number of programmers (6).

Timeline (for 8 months):

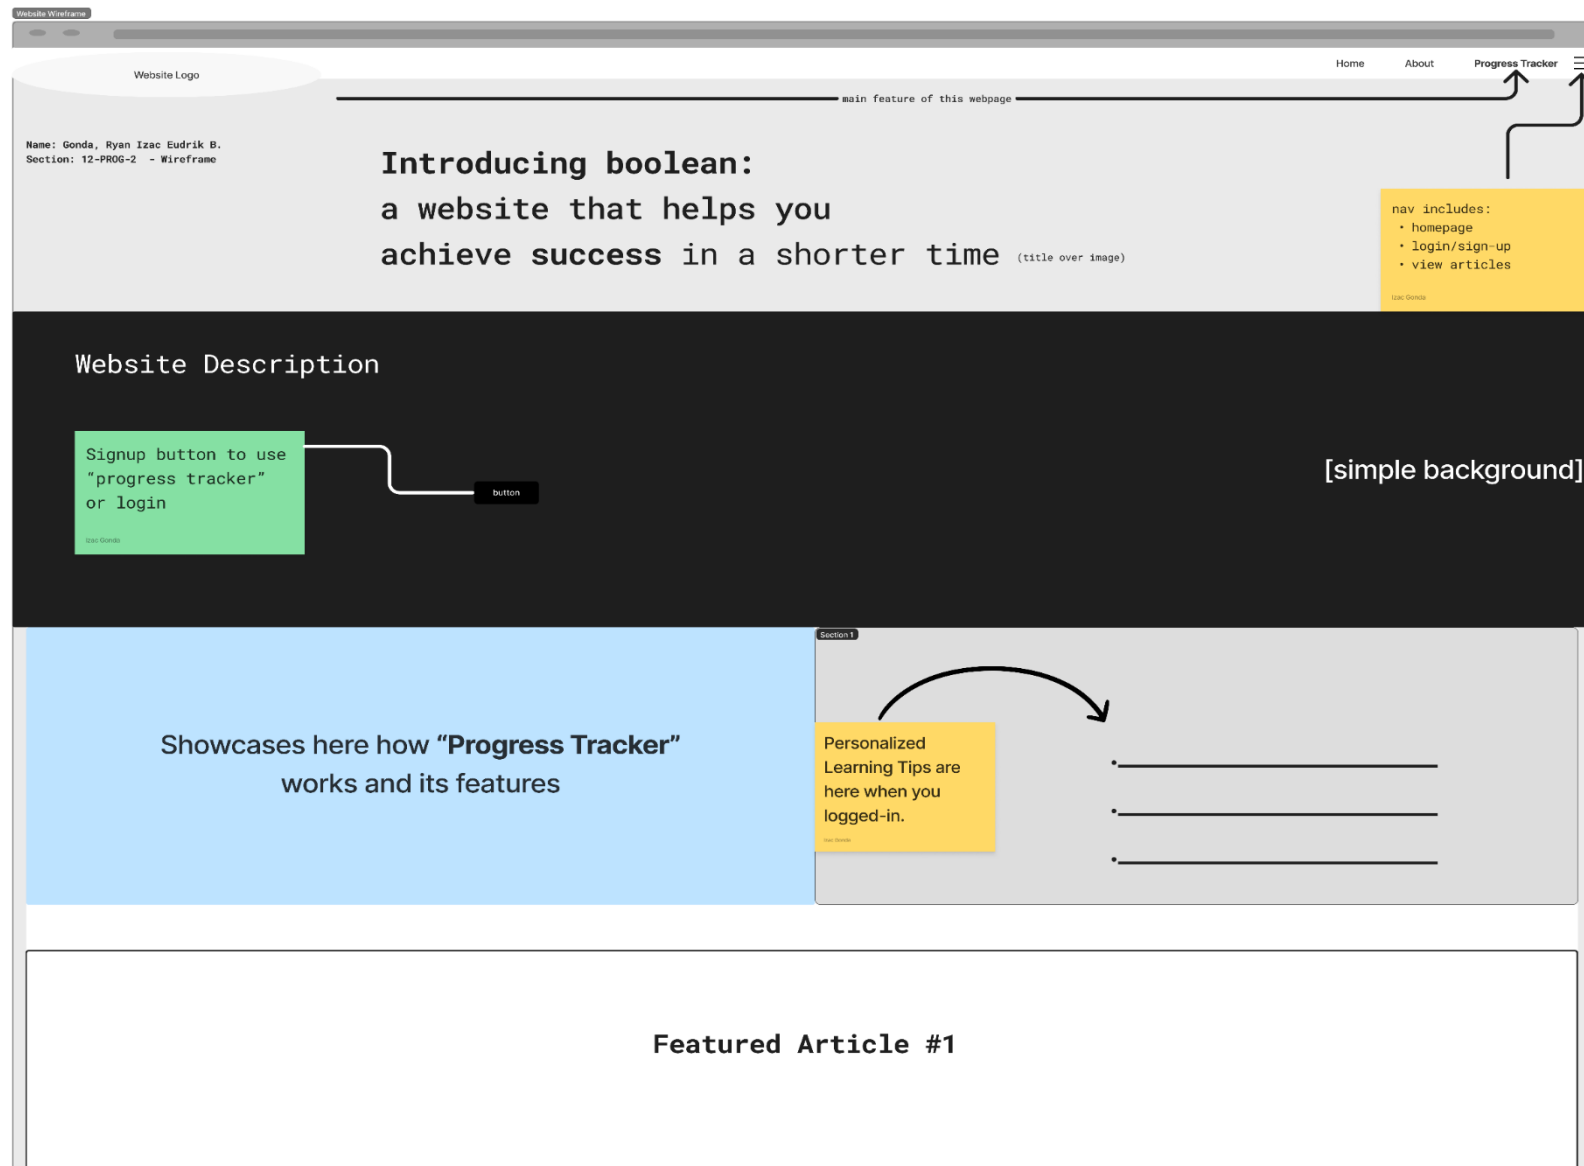

Monthly Compensation per Person = $2,662,000 \text{ pesos} / 6 \text{ programmers} / 8 \text{ months} = 55,525 \text{ pesos}$ monthly salary per programmer (rounded to the nearest peso).

$6 \text{ programmers} \times 55,525 \text{ PHP/programmer} = 333,150 \text{ PHP/month}$.
